Toolmax

General Engineering Limited

Architectural metalwork, bespoke fabrication and on-site fitting of functional and decorative mild steel, stainless steel, aluminium and non-ferrous elements.

BRIEF • SURVEY • DESIGN • MANUFACTURE • FINISH • INSTALL

“We pride ourselves on a fast, friendly and efficient service.”

Phil Catling – Managing Director, Toolmax Limited

HISTORY

Toolmax General Engineering Limited was established in 1977 as an Engineering, Sheet Metal and Fabrication & Welding Business with just three employees. Today, the Company has a total of 20 employees and is proud to still offer the old fashioned indenture apprenticeship and believes in the investing in young people. Toolmax is able to offer fabrication of architectural metalwork, one off items, small batch work, staircases, balustrades, bespoke railings and gates, small steel framed buildings and a site fitting service is available.

The value of structural and decorative steelwork within today's building is easy to understand.

Combining enormous strength with a lightness of line and colour, appropriate steelwork can be used to enhance the external features of a building, whilst its loadbearing characteristics can free valuable interior space.

Of equal importance is the way it enables security features to be discreetly incorporated from the outset – and not imposed as oppressive additions.

Toolmax specialise in bespoke fabrication and on-site fitting of functional and decorative mild steel elements as well as stainless steel and aluminium.

Polyester powder coatings, galvanising and anodising are also available to create additional visual appeal.

Working within craft based techniques and control systems, Toolmax provides quality metalworking skills to architects, contractors, builders, local and public authorities, and the general public.

A small and long established craft team work closely together at every stage from initial site measurements, including design and drawing where required, through to workshop fabrication, specialised finishing and on-site welding and cutting with all site crew holding CSCS, IPAF and PASMA cards.

“The standards of workmanship are excellent and the way your staff work on site has far exceeded our expectations.”

Martin Venn – Venn & Sons Limited

Working closely with architects and interior designers is critical to achieving the desired results. Toolmax pride themselves on understanding the concept of a design project and completing the job on time and within budget.
